### Updated ADHD guideline addresses evaluation, diagnosis ...

The ADHD Medication Guide is a visual aid for professionals caring for individuals with ADHD. The Guide includes only medications indicated by the FDA for the treatment of ADHD. In clinical practice, this guide may be used to assist patients in identifying medications previously tried, and may allow clinicians to identify ADHD medication options for the future. Medications have been arranged on the card for ease of display and comparison, but dosing equivalence cannot be assumed.

### List of ADHD (Attention Deficit Hyperactivity Disorder) ...

The ADHD Medication Guide © is a visual aid for professionals caring for individuals with ADHD. The guide includes only medications indicated for the treatment of ADHD by the FDA. In clinical practice, this guide may be used to assist patients in identifying medications previously tried, and may allow clinicians to identify ADHD medication options for the future.

### Revised July 2013

Stimulants are the best-known and most widely used ADHD medications. Between 70-80% of children with ADHD have fewer ADHD symptoms when taking these fast-acting medications. Nonstimulants were approved for the treatment of ADHD in 2003. They do not work as quickly as stimulants, but their effect can last up to 24 hours.

## **Treatment of ADHD | CDC**

Currently, stimulant drugs (psychostimulants) are the most commonly prescribed medications for ADHD. Stimulants appear to boost and balance levels of brain chemicals called neurotransmitters. These medications help improve the signs and symptoms of inattention and hyperactivity — sometimes effectively in a short period of time.

## **Parents Medication Guide**

ADHD medications are grouped into two major categories: stimulant and non-stimulant. Stimulant medications, such as methylphenidate and amphetamines, are highly effective treatments for ADHD and have been available for decades.

## **Medications Used in the Treatment of ADHD - CHADD**

Some patients take two ADHD medications simultaneously to achieve the best reduction in symptoms, although information on this practice is largely based on individual case experience and not from rigorous controlled studies, except for extended release guanfacine (Intuniv) and clonidine (Kapvay).<sup>23</sup>

## **Attention-deficit/hyperactivity disorder (ADHD) in ...**

The US Food and Drug Administration (FDA) has approved several kinds of medications for ADHD that include stimulants (methylphenidate-based and amphetamine-based products) and nonstimulants including atomoxetine and antihypertensives (alpha-2 adrenergic agonists). These medications are listed in the chart below which shows:
