Several RF and Microwave technologies will drive the industry forward in 2019. The RF and Microwave industry will continue to move towards technologies that have higher levels of integration and flexibility to enable multiple use sub-systems. Re-usability will drive down cost but more importantly, accelerates time to market.

Microwave and radio frequency energies have been used by the food processing industry since the 1970s for cooking or tempering deep frozen products. Recent advances have opened up new applications for pasteurizing, desinsectisation, drying and boost heating certain ingredients. Adapted solutions exist for dry goods, liquid and pastes, processed food or ready-to-eat meals.

Advanced Microwave Components, Inc.

Introduction. Advances in Microwave and Radio Frequency Processing presents innovative reviews as well as technical papers based on contributions presented at the 8th International Conference on Microwave and High Frequency Heating, September 3-7, 2001 at the University of Bayreuth, Germany. Recent applications of microwave and high-frequency radiation in the field of materials processing, chemical synthesis, food processing and in the biomedical area are presented.

Radio waves and microwaves are two types of electromagnetic waves with relatively long wavelengths. Radio waves are mostly used in the communication field whereas microwaves are used in industries and astronomy. The applications of radio waves and microwaves are not limited to the above mentioned fields.

A recently completed microwave radio telescope is the Atacama Large Millimeter Array, located at more than 5,000 meters (16,597 ft) altitude in Chile, observes the universe in the millimetre and submillimetre wavelength ranges. The world's largest ground-based astronomy project to date, it consists of more than 66 dishes and was built in an international collaboration by Europe, North America, East Asia and Chile.
