The reactor design was the objective of the chemical industry well before the first process design methods were developed. The first systematic approach used for optimization for reactor design is dated back in 1960 by Aris (1960). The first reactors were single phase and the development of multiphase reactor network synthesis received attention only after the late 90's.

Chemical reaction engineering handbook of solved problems

It is primarily a knowledge of chemical kinetics reactor design that distinguishes the chemical engineer from other engineers. The selection of a reaction system that operates in the safest and most efficient manner can be key to the economic success or failure of a chemical plant. Design of the reactor is no routine matter, and many alternatives can be proposed for a process.
