Introduction to Differential Equations  
Suppose we have an equation like and want to find a solution. Equations with derivatives are called differential equations and solving them means finding a function that satisfies the equation. In this case,  $y = f(x) = x^2 + C$  provides the family of solutions.

An equation that involves one or more derivatives of an unknown function is called a differential equation. The order of the highest derivative included in a differential equation defines the order of this equation.

A basic understanding of calculus is required to undertake a study of differential equations. This zero chapter presents a

short review. 0.1The trigonometric functions The Pythagorean trigonometric identity is  $\sin^2x + \cos^2x = 1$ , and the addition theorems are  $\sin(x + y) = \sin(x)\cos(y) + \cos(x)\sin(y)$ ,  $\cos(x + y) = \cos(x)\cos(y) - \sin(x)\sin(y)$ .

Differential equations are the language of the models we use to describe the world around us. In this mathematics course, we will explore temperature, spring systems, circuits, population growth, and biological cell motion to illustrate how differential equations can be used to model nearly everything in the world around us.

Differentials, like  $dx$ ,  $dy$ , represent a infinitesimal change in the variable, and are first introduced as part of basic calculus (or even precalculus, but without explaining what they are). Differential equations are much more advanced, and should be studied once you have a firm knowledge of both differential calculus and integral calculus.

Bernoulli Differential Equations - In this section we solve Bernoulli differential equations, i.e. differential equations in the form  $y' + p(t)y = y^n$   $y' + p(t)y = y^n$ . This section will also introduce the idea of using a substitution to help us solve differential equations.

differential equations is fundamental to much of contemporary science and engineering. Ordinary differential equations (ODE's) deal with functions of one variable, which can often be thought of as time.

### **MATH 219 Introduction to Differential Equations**

A differential equation is any equation which contains derivatives, either ordinary derivatives or partial derivatives. There is one differential equation that everybody probably knows, that is Newton's Second Law of Motion.
