Signal analyzers measure signals in the frequency domain, allowing us to see how much energy is present at particular frequencies. Today, they are used to view and demodulate complex signals, allowing users to fine-tune their EVM, amplitude flatness, and more. If you want to see what type of signal your device under test (DUT) emits, a signal ...

Using Signal Analyzer App - MATLAB & Simulink

You plug it in near the X10 signal source to verify signal quality at the source. Then move the analyzer to the receiver point and see the signal quality there. It was pretty easy to determine problem areas and where solutions were needed. If noise, interference, etc is happening inside or out, the analyzer should help identify the problem.
